

The Pulse of Life -Healing a Weary, Wounded World with Electro-Regenesis – by Daniel Reid

Grace - noun: a blessing; a sacred gift; a divinely bestowed talent; special favor or good fortune

Daniel Reid is the author of numerous books on traditional Chinese medicine and other alternative health care systems, including *The tao of Health Sex & Longevity*, *The Complete Book of Chinese Health & Healing* {Guarding the Three Treasures in UK & Australian edition}, *Handbook of Chinese Healing Herbs*, and *A Complete Guide to Chi-Gung*. His latest title is *The Tao of Detox: The Natural Way to Purify Your Body for Health & longevity*. He currently lives in Australia, where he is researching a book about ElectroRegenesis.

Talk About "Amazing Grace":

- After severely damaging his spinal cord in a massive motorcycle accident, Patrick McGrath of Adelaide, Australia, was left paralyzed from the neck down, with no sensation in his body all the way down to his hands and feet. A quadraplegic with no hope for recovery, he lay in bed still as a stone for eight years. Today, however, after only 14 weeks of treatment with a new therapeutic technology called "electro-regenesis," Patrick is now able to freely rotate his arms and move his upper spine, and he has regained physical sensation in his hands and feet. With continued treatment, he looks forward to getting out of bed soon and mobilizing himself in a wheelchair, perhaps even walking again some day. His attending physician, Dr. Zach Baran, describes these results as "Amazing...truly fantastic." Having applied this new medical technology to a wide range of other maladies in his clinic, Dr. Baran declares, "There is not a single medical condition that is not immediately improved by this treatment."
- Stan Kruder, also of Adelaide, Australia, shattered his ankle and had it repaired with conventional treatment in a local hospital. Suffering excruciating pain and debility, he was told that he would require at least three months on painkillers and crutches before he could even begin to walk normally again. Dissatisfied with that dismal prognosis, he went to see Dr. Baran, and after only three weeks of treatment with electro-regenesis, at a rate of just three hours per session three times a week, Stan was able to walk normally again---without crutches, without drugs, without pain, and without any swelling or inflammation in his ankle. "I've never seen such an amazing recovery from a fractured ankle," says Dr. Baran. "The absence of swelling is particularly remarkable."
- Monica Meren of Australia suffered for many years from intense chronic pain throughout her entire body, compounded by constant fatigue and insomnia, due to fibro myalgia, an inflammation of the tendons and soft tissues for which conventional modern medicine has no cure. After a treatment protocol with electro-regenesis of two hours per session twice a week for three weeks, followed by two hours once a week for another three weeks, Monica can now wear normal shoes again and walk without pain for the first time in years. She feels far less pain in her body, sleeps much better, enjoys increased energy, and plans to take a trip around Europe soon.
- Marlene Baisden of Ohio, USA, was diagnosed with an advanced state of nano bacteria infection in her bloodstream, an incurable condition that debilitates the circulatory system, progressively weakens the blood, and can result in premature death. After using the "Jai" device, a portable personal form of electro-regenesis therapy that can be used at home, for about six months, the nano bacteria has been completely eliminated from her bloodstream. She is now using the Jai to successfully treat a chronic candida infection.
- Dr. D. Price, who has been using electro-regenesis therapy for several months in her clinical

practice in Queensland, Australia, reports as follows on the "spectacular results" she has witnessed in her patients: "Longstanding chronic fatigue and fibromyalgia patients who were previously getting better very slowly or not at all responded significantly with every treatment. These patients experienced improved basal energy levels, greater physical, mental, and emotional strength, significant reduction of muscular aches and pains, reduction in lymph and fluid retention, improvement of joint pains and stiffness and an overall improved quality of life. . . I trialed conditions such as dysmenorrhoea (painful periods) with immediate pain relief within a few minutes of commencing treatment; menopausal conditions with adrenal exhaustion improved quickly; shoulder and neck pains that had plagued some patients for years disappeared after a few treatments; the pain of severe osteoarthritis of the hips was relieved to such a degree that the patient's depression lifted and she was able to take a holiday in Europe for three weeks; improvement in respiratory infections with reduction of fever and disappearance of pain within the first 25 minutes of treatment; chronic wound ulcers improving; and even cancer patients who noticed improved energy and well-being. I am very pleased to have access to such a valuable tool for healing and re-energizing difficult-to-treat patients in such rapid time."

The cases cited above are just a few examples of a growing record of successful treatments for so-called "incurable" conditions currently being achieved by a new medical technology called "electro-regenesis" (ER). All of these cases have two features in common: a negative prognosis of "incurable" from conventional modern medicine, and a positive healing response, often leading to complete cures, with electro-regenesis therapy. Needless to say, the long-suffering patients who have been fortunate enough to receive this revolutionary new treatment for their crippling conditions and painful diseases consider themselves blessed, and most of them are well on their way to a full recovery.

Electro-regenesis therapy is the brainchild of Dr. Keith Wendell, a holistic healer and medical metaphysicist residing on Mt. Tamborine in Queensland, Australia. The cumulative result of nearly twenty years of continuous research and constant scientific experimentation, ER technology has achieved such a quantum leap in therapeutics that within a decade it is likely to become the primary treatment of choice in human health care, both for acute diseases and chronic degenerative conditions. To those who have experienced its benefits, ER therapy makes surgery and pharmaceutical drugs seem like obsolete vestiges of primitive medicine.

Electro-regenesis is based upon the scientifically proven premise that the human body is essentially a highly complex, constantly self-transforming, fully integrated energy system, not simply an anatomical structure subject only to the mundane laws of mechanics and chemistry. This basic fact of life is nothing new: it has been known since antiquity in the traditional healing systems of China, India, Tibet, and other ancient Asian cultures, where healers have always regarded energy to be the most essential element of life, the most accurate indicator of health, and the most effective cure for disease.

Known in traditional Chinese medicine as chi, Indian ayurvedic medicine as prana, and ancient Tibetan medicine as lung, the vital energy of life manifests in many different ways within the human system and pulsates at various different frequencies, each one associated with the specific internal organs, bodily tissues, and vital functions which it governs. The genius of Dr. Wendell's work is that he has managed to "crack the code" of the human energy system by identifying the various vital energies that regulate the many biological functions and metabolic processes within the human body and replicating them precisely with modern electronic technology and computer science. These discoveries led him to invent electronic devices that can deliver natural healing energies directly into the organs, tissues, and cells of the human body--safely, effectively, and with consistently positive results. Whereas the healing powers of traditional energy therapists have always been conditionally dependent on the human limitations of their own bodies, the shifting states of their own energy systems, and the intrusive influence of their own minds and emotions, Dr. Wendell's healing devices can work day and night, driven by a simple battery and unerringly controlled by precision circuitry and computerized programs that deliver unlimited, uniform, and perfectly balanced pulses of healing energy into the patient's body.

Unlike other electronic medical devices, which simply jolt the nerves and tissues with bolts of electricity that bounce haphazardly through the body, ER technology generates a gently pulsating stream of electrons that flows smoothly through the body's internal energy network, like water gliding slowly through a field of irrigation channels, gradually permeating every tissue and saturating every cell with the healing energy and regenerative power of electrons.

To visualize how this works, picture in your mind a profile of the human body that maps the internal pathways of the human energy system, such as the meridian charts you always find hanging on the wall of any Chinese acupuncture clinic, depicting the major meridians, minor sub-channels, and micro-conduits through which the vital energy of life flows through the body. Picture this network of channels as a black-and-white template of the human energy system, then see a small box off to the side, with two wires connecting it to electrode pads attached to the wrists or ankles of the body. Now watch as an ordinary electric current travels along the wires and enters the electrode pads which connect them to the body: as the current passes through the pads, it's transformed into a gently pulsating stream of luminous liquid light that runs into and flows through the body's meridians in spiral waves of rainbow color, illuminating the channels with radiant energy as it streams through them. Like water filling an irrigation system from a single inlet, this glowing energy first fills the major channels of the body--the twelve primary meridians of the vital organs--then flows through the minor connecting channels and seeps into all the micro-circuits which feed energy into the deepest recesses of the body. When all the channels of the system are full, the energy then spills over and saturates all the spaces between the lines, as it enters the cellular matrix of the tissues and permeates each and every one of the body's 75 trillion cells. Now the entire body glows with pulsating waves of radiant energy. Finally, the sparkling electrons penetrate the nucleus of each cell and run along the spiral strands of the DNA, rebalancing and regenerating the primordial codes of life. Picture that in your mind's eye, and you will see how electro-regenesis works.

As the smallest particle of matter in the body's molecular structure, electrons form the fundamental "bricks and mortar" that build new cells, repair damaged tissues, and mend broken DNA on the atomic level throughout the body. At the same time, the electromagnetic force field which conducts these waves of electrons through the body, like an ocean conducting waves of water to the shore, has powerful energetic properties that recharge the electromagnetic potential, rebalance the polarity, and restore the functional integrity of each and every one of the 75 trillion cells in the body. Here in lies the brilliance of electro-regenesis: it operates simultaneously in the dimensions of matter and energy, regenerating both the forms and the functions upon which the health and longevity of the human body depend.

ER therapy is based on Dr. Wendell's scientific discoveries and metaphysical insights regarding the essential nature of the bio-electric currents which animate the human body and the channels that conduct them through the human energy system. In addition to identifying and precisely replicating the frequencies and wave patterns of these vital currents, he also found that this energy can only function effectively as a healing force when the form of the body's bio-electric field, or "aura," is properly balanced. Here again we see the interaction of form and function in human energetics: only a balanced and correctly formed field allows the precisely calibrated energy currents to function properly in the human system.

As Thomas Edison once remarked when asked about his many inventions, "The work is 1 per cent inspiration and 99 per cent perspiration." It took Dr. Wendell almost two decades of progressive experimental tests and clinical trials to perfect the technology that finally rendered his theoretical insights into practical tools that can replicate the natural bio-electric currents of the human energy system reproduce the balanced bio-fields in which they function, and deliver these healing energy pulses safely and effectively into the human body. The results of his efforts are two devices that may soon become the world's primary therapeutic tools in the treatment of human disease and degeneration: a clinical unit about the size of a CD player called the "G4Z," and a pocket-sized portable device designed for personal use at home called the "Jai."

The G4Z and the Jai are both built with the same basic technology. The difference lies in the spectrum of currents and range of frequencies which they generate for therapeutic applications. The G4Z produces a variety of different currents that are specifically calibrated to deal with a broad range of pathological conditions in a clinical setting. The G4Z is the "heavy artillery" of ER therapy: it is designed to treat everything from the simplest to the most severe conditions in human pathology, including life-threatening diseases in the advanced stages of development which conventional modern medicine regards as "untreatable" and "incurable." Its administration requires the assistance of a qualified ER therapist.

The Jai is a compact personal ER device that may be safely and simply used at home or at work for both curative and preventive self-therapy. The unit may be clipped to a belt or tucked into a pocket without interfering with ordinary daily activities. The Jai is set at a single current which has been found to deliver optimum therapeutic benefits to the energy systems of normal healthy people. The Jai's soothing energy current may be channeled into the body through a selection of four unique circuits, each of which is designed to influence a different dimension of the human energy system. Each circuit can be set to deliver its bio-electric pulse at twelve precisely calibrated frequencies that channel the energy to the specific tissues, organs, and vital functions targeted for treatment.

The micro-currents and frequencies generated by these devices have been selected and tuned with absolute precision to replicate exactly the basic vital pulses of the life force within the human body. Each setting homes in like radar to particular parts of the body and locks the healing energy onto the related vital pulse. For example, if a patient is suffering from a disorder of the nerves, a setting is selected which delivers precisely the form and frequency of energy required to restore optimum functional balance to a healthy human nervous system. By rebalancing the energy pulse that governs the nervous system, the root cause of the condition is corrected at its source. Both the G4Z and the Jai deliver their electrically generated healing energies into the body via spongy pads that are soaked in ordinary tap water. The damp pads are then wrapped snugly around the wrists, hands, ankles, or feet with velcro tabs. "The pads," states Dr. Wendell, "are made entirely of organic material, and they are the key that opens the gate of the human energy system to the therapeutic power of the incoming energy pulses. The water they hold against the skin is the bridge between the technology and the body."

The pads keep a layer of water floating between the incoming electron currents generated by ER technology and the body's own natural bio-electric field. This layer of water acts as a natural transformer to adapt the ordinary electric charge from the ER device into a bio-active pulse of vital energy that is fully compatible and interactive with the living organic energy of the human body. Water is the most abundant element on earth and the most fundamental component of life, and it constitutes about 80 per cent of the human body. Water stores, transforms, and conducts the vital energy of life, and therefore it serves as the essential link that bridges the gap between inanimate technology and organic life. Owing to its unique capacity to hold a precisely patterned imprint of the bio-electric energy field of any organism to which it is exposed, the water in the pads functions both as a personal energy template and a portable transformer to convert the incoming waves of raw electrons into gentle pulses of bio-electric energy that are precisely synchronized with the specific patterns of each individual's own unique energy profile. The water thus tailors the current perfectly to fit "like a glove" in your own personal energy field. Like all true strokes of genius, electro-regenesis fuses the most advanced scientific ingenuity with the most basic principles of the universe to achieve a quantum leap in human health and healing.

Therapeutic Actions

Treatment by electro-regenesis technology provides a broad spectrum of therapeutic benefits that have both curative and preventive applications in human health care. First and foremost, ER therapy swiftly clear blockages and corrects imbalances in all of the major meridians and sub-channels of the human energy system, thereby restoring the free flow and natural homeostatic balance of the vital energies upon which health and longevity depend. The primary principle in the diagnosis and treatment of disease in traditional Chinese, Tibetan, and other ancient Asian medical systems is that all physical, mental and emotional disorders can always be tracked back to basic imbalances and blockages in the human energy system. Disease is therefore viewed as a disruption in the free flow and balanced distribution of internal energy within the body. Traditional treatments such as acupuncture, moxibustion, acupressure, and massage stimulate specific points along the meridians in order to restore the normal flow and natural balance of energy throughout the system. The Jai and G4Z rebalance and restore the free flow of energy through the body faster and more effectively than any traditional method does, with far more consistent and reliable results, and without depending on the shifting variables of the therapist's own energy, skill, and mood.

The physical body and all of its component organs are really just denser forms of the vital energies which govern them, and therefore all physical ailments are caused by imbalances in the invisible energy currents which feed the forms and fuel the functions of the body and its organs. Thus the only effective way to cure a particular disease in the body is to correct the related imbalance in energy and restore its free flow to the affected organs. This permits the energy to repair the damaged tissues and regenerate its organic functions. Furthermore, in order to sustain optimum health, not only must each of the vital energies that govern the individual organs be properly balanced and freely flowing, they must also all function together in synergistic harmony and perform their tasks in concert rather than in conflict with one another.

To get an idea of how energy healing works, imagine that all the vital energies of the body perform together in precise harmony, like a symphony orchestra, with each organ playing a different instrument--the liver on the cello, the kidneys in the violin section, the stomach blowing the clarinet, the bowels playing the "wind" instruments, the heart beating the drums, and so forth. When each of the organ energies is properly balanced and "in tune," and when they all pulse together in symphonic concert, the harmonious "body song" of perfect health is heard. In traditional Chinese medicine, the delicate art of "pulse diagnosis" (ba mai) is applied with the fingertips to twelve subtle points on the wrists in order to "listen" by touch to the vital pulses of the body and determine which organ energies are pulsating out of tune and thereby causing disease and dysfunction. In electro-regenesis therapy, the vital pulses of all the internal organs are imprinted in the water held against the skin within the damp pads. Any pulse pattern that's imbalanced and out of tune with the others is automatically rebalanced and restored to harmonious synchronicity with the whole system by the incoming pulse patterns from the Jai or G4Z, which are precisely tuned to correct any and all imbalances in the various frequencies of the body's vital energies. The properly retuned pulse is then transmitted back into circulation in the body through the channels of the energy system, which carries it to the related organ to restore balance and functional harmony.

Let's take, for example, a diseased and dysfunctional liver whose tissues have been damaged by long-term excess consumption of alcohol, drugs, and/or chemically contaminated junk food. The chronic toxic overload has distorted the pulse and disrupted the flow of the liver's energy, which has consequently become weak and imbalanced. This condition in turn deprives the liver of sufficient energy to cleanse and regenerate itself, resulting in further deterioration and dysfunction, in a continuous cycle of progressive destruction which will, if not halted, cause hepatitis, cirrhosis, digestive distress, and constant fatigue, as well as the related emotional disorders of chronic anger and depression, and finally cancer and death. In traditional Chinese pulse diagnosis, the liver pulse would feel "coarse," "choppy," and "sluggish." In our analogy of the human energy system as a symphony orchestra, the liver's energy would sound like a cello played by a drunken musician--harsh, abrasive to the ear, and completely out of tune with the other instruments.

When the patient is hooked up to a Jai or G4Z that has been specifically set to detoxify and heal the liver, the perfectly balanced pulses of the incoming ER energy over-ride the imbalanced pulses of the body's liver energy, and the healing currents are channeled through the liver meridian directly into the ailing liver to repair damaged tissues, regenerate healthy cells, rebalance the vital pulse of the liver, and restore its functional harmony with the whole system. When the first treatment is terminated, the distorted liver pulse will re-assert itself, but less intensely than before, as though the inebriated cello player has sobered up a bit and is now playing less out of tune. Gradually, with each successive ER treatment, the liver's tissues are all repaired, its vital functions are all restored to normal, and its energy is back in proper balance and pulsing in harmony with all the other organs of the system. The body is now healed, and all of its energies are once again pulsing harmoniously in tune with the natural rhythms of the "body song" of life.

How long it takes to restore a healthy state of balance and harmony to the body depends on how long the unbalanced state of disease was allowed to continue and how deeply the damage it caused has lodged in the tissues. Symptoms that have manifested for only a few weeks or months can often be eliminated and their underlying imbalances corrected with only a few days of ER treatment. More serious conditions that have continued unchecked for many years might take six months to a year of regular therapy to heal. Either way, bodily health can only be recovered when vital energy has been properly rebalanced and functional harmony has been fully restored to the whole system.

Another major therapeutic benefit of ER therapy is the restoration of free circulation of blood to all of the internal organs and bodily tissues, particularly in areas that have been chronically deprived of sufficient blood supply due to congestion, inflammation, lesions, infections, and other pathological conditions that block blood circulation. A basic axiom of traditional Chinese medicine states, "Blood follows where energy leads." This means that poor circulation of blood in tissues that have been damaged by traumatic injury or chronic degenerative conditions may be quickly restored simply by stimulating the free flow of energy to those tissues via the meridians, which by-pass physical blockages. Wherever energy flow is enhanced, better blood circulation follows immediately. Conventional modern medicine, which does not even recognize the decisive role of energy in human health and healing, has no means of boosting and balancing energy distribution in the body, and therefore it lacks this highly effective method for restoring blood circulation to wounds and congested tissues.

Without adequate circulation of fresh blood, toxins and metabolic wastes in diseased organs and damaged tissues cannot be flushed away and continuously accumulate in the cells, causing even more damage. Sluggish circulation also blocks delivery of fresh nutrients and oxygen, impairs metabolism and cellular regeneration, and allows tissues to continue deteriorating at rapidly accelerating rates.

Electro-regenesis has demonstrated remarkably swift results in stimulating regeneration of new tissue in chronic festering wounds that do not respond to any other type of treatment. In one clinical study conducted in a hospital, 23 decubitus ulcers that standard medical protocols had utterly failed to heal after nearly 18 months of continuous treatment, all cases showed rapid positive healing responses to ER therapy after only a few hours of treatment.

In another clinical study of chronic superlative lesions, the patients were divided into three age groups in order to compare the rate of healing according to age. In conventional therapeutics, it's a well known fact that the rate of wound healing is inversely proportional to the age of the patient: the older the patient, the slower the rate of healing. Wounds normally heal far more slowly in elderly patients than in the young; this is due primarily to progressively decreasing production of the healing hormones serotonin and melatonin and increasing secretion of the immune-suppressant stress hormone cortisol with age. However, when these cases were treated with ER therapy, the age factor was totally eliminated, and 70-year-old patients healed as swiftly and completely as 20-year-old patients. In traditional Chinese chi-gung and tai-ji practice, a similar therapeutic rejuvenation in elderly practitioners has been observed for centuries and is known as the huan-tung ("youth restoring") effect. ER achieves this renewal of optimum immune response immediately and consistently, without requiring years of daily practice in breathing exercise and body movement. Subsequent studies have repeatedly confirmed that ER therapy reduces secretion of cortisol while increasing production of serotonin, melatonin, and other immune response boosters in all subjects tested. This makes electro-regenesis therapy one of the most powerful and least invasive methods in the world for enhancing human immune response and stimulating the body to heal and regenerate itself naturally.

"Electro-regenesis" is not just a catchy phrase. You can actually see the rapid regeneration of the cellular matrix when ER therapy is applied to tissues damaged by traumatic injury or chronic degeneration. Within half an hour of commencement of treatment, a drop of clear fluid appears in the center of the wound. Strips quickly form across the surface of the droplet and then weave themselves into a pink membrane of new cells. Another droplet then appears, and the process repeats itself. This rapid cellular regeneration is fueled by an enhanced supply of fresh blood drawn to the wound by the continuous flow of energy from the ER device. Necrotic tissue quickly dissolves and disappears, and healthy living tissue forms in its place. This is, quite literally, "regenesis" of the cellular structure of the body, and it's accomplished by a healing stream of electron waves delivered in precisely the right form and frequency required for the job. That's why this therapy is called "electro-regenesis."

One of the most basic ways whereby ER therapy promotes cellular regeneration is by stimulating DNA to synthesize the specific enzymes that are needed to build new cells and reknit damaged tissues and by elevating energy production in the mitochondria of each individual cell involved in the healing process. When the electrons penetrate into the DNA, they function as a sort of fuel that energizes DNA activity, stimulating its built-in cellular repair codes and boosting the supply of cellular energy required to conduct the repair process.

The steady stream of electrons introduced into the cellular matrix of the body by ER therapy also acts as a highly potent antioxidant. Modern medical science has clearly established the fact that free radicals are the primary cause of the cellular deterioration and progressive tissue damage associated with aging and chronic degenerative conditions. Free radicals are highly reactive molecular fragments with one electron missing in their outer orbits. They are produced internally as natural by-products of metabolism and introduced externally from toxins in food, water, air, and pharmaceutical drugs. Free radicals roam through the body acting like "cellular terrorists," attacking and destroying healthy tissues in order to grab an extra electron to rebalance their atomic structure. The only way to counteract the constant corrosive activity of free radicals in the body is to increase the body's supply of antioxidants, or "free radical scavengers," which neutralize free radicals by donating an extra electron to rebalance their polarity, thereby "calming" them down and halting their destructive activity.

Conventional protocols for enhancing antioxidant activity in the body include dietary reform, nutritional supplements such as vitamins C and E, beta-carotene, selenium, and zinc, ionized oxygenated water, and breathing exercises to elevate oxygen and negative ion supplies via the

respiratory system.

While these methods are always helpful, their efficacy depends entirely on the varying conditions and functional integrity of the individual's digestive, circulatory, and respiratory systems, which in ailing, elderly, and highly toxic patients are usually very weak and inefficient. ER therapy by-passes these physiological pathways and delivers its powerful antioxidant action directly to the cells via the meridians, which permeate every tissue and reach every cell in the body. The billions of electrons which stream into the body with ER therapy are already in free form, and as they flood through the tissues, they instantly donate an extra electron to each and every free radical they encounter, immediately terminating this pernicious source of tissue damage, while also providing rapid elimination of cellular toxins.

In addition to the potent therapeutic actions described above, ER therapy provides the human body with a wide range of other important curative and preventive health benefits. Both the G4Z and the Jai have demonstrated strong analgesic properties and provide swift, effective pain relief for fibro myalgia, migraine, arthritis, and other types of chronic pain. ER therapy may also be used to relieve the intense pain associated with post-surgery, traumatic wounds, broken bones, and other acute injuries. Preliminary results in several cases of acute microbial infection indicate that ER therapy also has potent antibiotic and blood-cleansing properties, and a hospital in Queensland, Australia, found that intermedial treatment with the G4Z on the feet of an elderly woman halted a rapidly progressing gangrene infection that would otherwise have required amputation of both her feet. Both the G4Z and the Jai have recently received official certification as approved medical devices from the Therapeutic Goods Association (TGA) in Australia, and they are now entering the mainstream of modern therapeutics. As their clinical usage spreads, more and more medical applications for ER therapy are being discovered all the time.

ER therapy, particular long-term application at home with the portable Jai device, can significantly enhance a person's overall state of health and sense of well-being on the physical as well as the mental and emotional levels. All regular users of the Jai report a marked increase in physical energy and a significant enhancement in mental clarity. This is no doubt due to the continuous cellular detox and the constant stimulation of energy production in the mitochondria of the cells which comes with frequent use of the Jai at home. Many emotionally stressed Jai owners testify that regular use of the device effectively elevates and balances their moods and pacifies emotional turmoil. The Jai also has specific settings which assist restless insomniacs to enjoy deeper, more restful sleep at night. Meditators have found that the highly refined frequencies of the Jai's "source" circuit are helpful in stabilizing prolonged states of contemplative concentration and gaining access to higher dimensions of awareness, while reformed substance abusers use the "body" and "soul" circuits to balance their neurochemistry, calm their nerves, and raise the vibrational frequency of their energy fields to levels that naturally quell their proclivity for using intoxicants.

The possibilities for positive applications of electro-regenesis therapy--both at home and in the clinic, preventive as well as curative, for acute and chronic conditions alike--are endless, and the only limiting factor is the individual's own mind, attitude, and degree of willingness to change the psychic patterns and personal habits that permit most physical diseases and chronic debilities to develop in the first place. We'll therefore conclude this discussion of electro-regenesis with a brief review of this pivotal and potentially empowering--or disempowering-- psychic factor.

Psyche and Soma

In traditional Chinese medicine, body, energy, and mind are called the "Three Treasures" of life, and all three are inseparably linked functional factors in human health and longevity, as well as in the diagnosis and treatment of disease. Traditional healers have always known that negative mental and emotional states such as anger, jealousy, pessimism, and self-loathing invariably generate negative physical conditions, such as heart disease, cancer, hypertension, and chronic degeneration of the body. That's why negative emotions are referred to as "poisons" in ancient Asian medical traditions.

The primordial source of the "Three Treasures" is an immortal state of luminous awareness endowed with the infinite potential energy of creation. This is the state from which we come before birth and to which we return after death. It is also the state of "enlightened awareness" which serious practitioners of Buddhist and Taoist meditation try to realize while still alive in their bodies. The infinite potential energy associated with this luminous awareness is the energy which metaphysical healers access for healing purposes, and these are the highly refined frequencies replicated by ER technology. The luminous energy of this primordial state of awareness has three primary qualities: "wisdom" (i.e. infinite intelligence); "compassion" (i.e. unconditional love); and "power" (i.e. infinite potential to create and heal). All three are inseparably linked, which basically means that the power to heal is associated with wisdom and unconditional love.

Consequently, cultivating wisdom and learning to love yourself unconditionally is the fundamental key to learning how to heal yourself, and applying unconditional love to others is the secret to helping others to heal. That's why so many people get sick again and again, even after receiving cures from true healers who can access the infinite healing power of the universe and channel it directly into their patients' energy systems: instead of learning to love themselves unconditionally and thereby hold that healing energy within their bodies, they return instead to their old self-destructive attitudes of guilt and self-loathing, thereby setting the stage for the recurrence of their old diseases and debilities. This is how the healing energy of the universe operates: it responds only to the vibration of unconditional love and can only be wielded with wisdom. While all this may sound rather esoteric, and to some minds downright dubious, it nevertheless remains a basic fact of life, and has been proven time and again throughout the ages. What's different about it all today is that someone has finally figured out a way to reproduce some of these highly refined healing frequencies with modern technology and to channel them into the human system through the fundamental element of water.

The medium through which negative mental and emotional factors cause physical disease and degeneration in the body is energy, the bridge which links the functions of body and mind. Similarly, energy is the basic connection which transforms the "power of positive thinking" into a dynamic healing force that can cure all physical afflictions. This natural healing mechanism, whereby positive thoughts, loving feelings, and a cheerful spirit activate the body's innate immune responses, is known in modern medical terminology as "psychoneuroimmunology" (PNI). Happy thoughts and loving feelings stimulate the brain to secrete specific neurotransmitters called "neuropeptides," which communicate directly with the glands of the immune system and stimulate them to release the hormones and enzymes that are needed to repair damaged tissues, restore vital functions, and heal the body. Conversely, gloomy attitudes towards life such as apathy, pessimism, and hatred and negative emotional states like anger, jealousy, and self-loathing cause constant stress reactions in the body, triggering the secretion of cortisol and other distress hormones that immediately shut down all immune responses and poison the blood and tissues with their highly toxic acids and metabolic wastes.

While it's all well and good to advise the sick and infirm to cheer up and look on the bright side with encouraging words such as "don't worry, be happy," in reality bedridden patients who are weak and weary from prolonged illness and who've already reached the advanced stages of dis-ease and degeneration are usually far too debilitated and distressed to muster the clarity, will, and energy needed to initiate and sustain the deep psychic self-transformation that can halt degeneration and activate regeneration of natural healing responses. Patients whose brains and bodies have been further damaged by long-term therapy with toxic chemical drugs, which is so common today, are even less likely to activate the PNI self-healing response. It takes time and energy to transform the habitual negative attitudes and self-destructive emotions of a lifetime into positive attitudes and constructive feelings that can trigger the body to heal itself naturally, and time and energy are always in critically short supply for the precariously ill patient.

This is when electro-regenesis comes to the rescue by providing an externally generated source of healing power to the internally depleted body of the patient. By pumping energy precisely tuned to the frequencies required for human healing directly into the body from the outside, ER therapy temporarily by-passes the need for psychic self-transformation on the inside and swiftly supplies the life-saving regenerative power which critically ill patients are no longer capable of producing for themselves. Electro-regenesis thus grants these patients a "new lease on life" by reversing their rapid decline towards death.

However, unless the patient takes advantage of this new lease on life to change the negative mental factors and self-destructive behavior that predispose the human body to physical disease and degeneration, those ailments will later recur again and again, and the healing benefits of ER treatment will only be temporary rather than permanent, merely palliative rather than curative. This is the pivotal factor which determines whether ER therapy ultimately saves a life nearly lost, or simply delays an inevitable plunge towards death. The fact that ER therapy can cure diseases that were previously regarded as incurable, and regenerate tissues ravaged by chronic degenerative conditions that were formerly viewed as untreatable, has been proven beyond doubt in clinical practice. But whether these amazing cures and rapid recoveries prove to be lasting or fleeting depends entirely on the patient's willingness to correct the underlying emotional and mental imbalances and alter the self-destructive habits that lie at the root of most physical disease and degeneration.

Electro-regenesis can definitely give even the most desperately ill patient another chance to recover when all other medical therapies have failed, but only the patient's own firm determination to forge a positive state of mental balance and emotional harmony can transform this second chance into a lasting state of health and longevity. Above all, this means that the patient must stop generating the self-destructive energies of guilt and self-loathing and start cultivating the self-healing energies of unconditional love and forgiveness. It's as simple as that, but for some people it's the hardest thing of all to do.

By utilizing the most highly advanced technology, electro-regenesis plugs patients directly into a limitless and immutable source of healing power and provides ordinary people with instant and unimpeded access to fields and frequencies of energy that previously only the most highly advanced adepts of arcane spiritual disciplines could access. In the course of the healing process that it generates within the body, ER therapy also opens the patient's mind to the highly refined states of awareness with which these powerful healing energies are naturally associated metaphysically. This experience grants ordinary people a glimpse of their own inherent potential to attain that same self-perfected state of luminous grace and thereby gain permanent access to those radiant fields of healing energy and tap into those infinite reserves of regenerative power by virtue of their own inner vision and effort.

Opening that spiritual gateway is by far the greatest gift that anyone can possibly offer to another, but not everyone has the capacity to recognize and receive the power of such grace. Those who cannot grasp it will still benefit from the healing energy that radiates through to them from that source, but they must continue to depend on healers and healing technology to access it. Those who recognize the light and don't recoil from its brilliance will pass through that shining gate on their own power and unite with its source to transform themselves into healers of the world.
